Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

1. Claims 3-6, and 16-22 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Regarding claim 3, the claimed subject matter “A computerized method of managing a bandwidth securitization instrument”, is directed toward a software program per se. Since a computer program is merely a set of instructions capable of being executed by a computer, the computer program itself is not a process. In contest, a claimed computer-readable medium encoded with a data structure defines structural and functional interrelationships between the data structure and the computer software and hardware components which permit the data structure’s functionality to be realized, and is thus statutory. The same remark applies to claims 4-5.

Claims 3-6 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Regarding claim 6, the preamble of the claim recites “An electronic method of assigning a value to a bandwidth securitization instrument”, however, the body of the claim appear to recite an abstract idea of computer instructions, lines 3-17. Since there is no physical application that produces a useful, tangible, and concrete result, the claim is, therefore, non-statutory. The same remark applies to claims 3-5.
